DATE MAILED: 08/18/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/832,899

Applicant(s)

BALLOUL ET AL.

Examiner

Timothy M. Brown

Art Unit

1648

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 April 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3,5-7 and 10-25 is/are pending in the application.
- 4a) Of the above claim(s) 7, 16, 17 and 19-23 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3,5,6,10-15,18,24 and 25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 11 April 2005.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____.

DETAILED ACTION

This Non-Final Office Action is responsive to the communication received April 11, 2005. The status of the claims is as follows:

Claims 1-3, 5, 6, 10-15, 18, 24 and 25 are under examination.

Claims 7, 16, 17 and 19-23 are withdrawn.

Claims 4, 8 and 9 are canceled.

The rejection of claim 5 under 35 U.S.C. 112, first paragraph and claims 1, 2, 10-12, 18 and 25 under 35 U.S.C. 102(a) are new grounds of rejection that were not necessitated by amendment. The Examiner regrets any inconvenience to Applicants.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3, 5, 6, 10-15, 18, 24 and 25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite in that the recitation of "wherein said ligand moiety is a polypeptide" lacks antecedent basis. This limitation lacks antecedent basis because it refers to a single ligand moiety, yet it is preceded by the language "at least one ligand moiety." Amending the claim to recite "wherein said at least one ligand moiety is a polypeptide" would overcome this rejection.

Claim 5 is indefinite in the recitation of “a cellular protein differentially or overexpressed” on tumor cells. It is unclear how a cellular protein that is “differentially” or “overexpressed” may serve as an anti-ligand for targeting tumor cells when normal cells would also express the cellular protein, albeit at different levels. Thus, directing infection using such proteins would not “target” the poxviral particle to the target cell. “Differentially” and “overexpressed” are also terms of degree that lack adequate clarification in the specification. The specification fails to provide endpoints for these relative terms that would allow one skilled in the art to appreciate the scope of the claimed invention. Amending the claims to provide that the “differentially or overexpressed” polypeptides comprise the polypeptide examples referred to in Applicants’ traverse would overcome this rejection.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 5 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. Although the specification enables targeting poxviral particles using cellular antigens that are overexpressed on tumor cells, the specification does not enable targeting poxviral particles using cellular antigens that are “differentially expressed” on tumor cells. Making and using such a poxviral particle would require one of ordinary skill in the art to invest undue experimentation.

A number of factors are considered in determining whether “undue experimentation” is required. These factors include: the breadth of the claims; the nature of the invention; the state of the prior art; the level of one of ordinary skill; the level of predictability in the art; the amount

of direction provided by the inventor; the existence of working examples; and the quantity of experimentation needed to make or use the invention based on the content of the disclosure. *In re Wands*, 858 F.2d at 737, 8 USPQ2d at 1404.

In this case, claim 5 provides that poxviral particle is targeted based on a cellular antigen that is differentially expressed on tumor cells. Giving the claims their broadest reasonable interpretation, “differentially expressed” implies that the tumor-specific antigen may be underexpressed in tumor cells. Although targeting viral infection to tumor cells has been practiced in the art, it typically involves using cellular antigens that are expressed in greater numbers on tumor cells than on normal cells (see e.g. *Cancer Gene Therapy* (2000) 7, 6, 901-904). One skilled in the art could not predict how to target viral infection based on cellular antigens that are underexpressed on tumor cells since these tumor cells would not bind and integrate virus. Thus, practicing the claimed invention would require one skilled in the art to rely heavily on the guidance of Applicants’ specification. The content of the specification however relates to cellular antigens that are overexpressed on tumor cells (see e.g. specification, p. 10). Based on the lack of guidance in the specification and the unpredictability of targeting viral infection using underexpressed cellular antigens, one skilled in the art would have to invest undue experimentation in order to make and use the invention as claimed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 2, 10-12, 18 and 25 rejected under 35 U.S.C. 102(a) as being anticipated by Collado et al. (Vaccine (July 2000) 18, 3123-3133).

Applicants' claims are interpreted as being drawn to a poxviral particle having a targeted infection specificity that is provided by a heterologous targeting ligand, wherein the heterologous targeting ligand is a polypeptide that is fused to the expression product of the A27L gene (i.e. p14), and wherein the poxviral particle is an intracellular mature virus (IMV). The claims provide that the ligand is fused to the N-terminus of p14 and that the ligand further comprises a signal peptide.

Collado et al. disclose a recombinant vaccinia virus having a heterologous p14 polypeptide comprising p14 fused to the Env protein of HIV (see e.g. abstract, lines 3-5). Collado et al. provide that the heterologous polypeptide is fused to the N-terminus of p14 (Fig. 1) and that the heterologous polypeptide comprises a trans-Golgi signal peptide. It follows that the heterologous polypeptide has a trans-Golgi signal peptide in that the heterologous polypeptide is glycosylated during the post-translational processing of the heterologous polypeptide in BCS-40 cells (see p. 3126). Based on this disclosure, Collado et al. anticipate the subject matter of claims 1, 2, 10-12, 18 and 25.

Response to Arguments

35 U.S.C. 112, second paragraph – Claims 1-3, 5, 6, 10-15, 18

Applicants argue the language “a cellular protein differentially or overexpressed” satisfies the clarity requirements of 35 U.S.C. 112, second paragraph. Applicants reason that one

Art Unit: 1648

skilled in the art would appreciate the meaning of “differentially” and “overexpressed” given that there are examples of such proteins in the art. Applicants point to cellular antigens that are expressing during the fetoembryonic period and the MUC-1 antigen which shows higher expression in tumor cells. This argument is not persuasive because it relies on limitations that are not recited in the claims. Moreover, the language “differentially” or “overexpress” is relative language and the claims do not provide a comparison for a normal level of expression. The specification also fails to clarify these relative terms in that it does not provide end point data that would allow one skilled in the art to determine the range over which a cellular antigen is “differentially” or “overexpressed.” Accordingly, the rejection of the claims as indefinite is maintained.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy M. Brown whose telephone number is (571) 272-0773. The examiner can normally be reached on Monday - Friday, 8am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Housel can be reached on (571) 272-0902. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
